

Dear Hiring Team,

I am writing to apply for the Logistics Intern position. My connection to Volvo is personal; my grandfather owned and drove a Volvo semi-truck, and growing up around it sparked my fascination with transportation and logistics. That early interest led me to where I am today: a Ph.D. candidate in Transportation Engineering at the University of Minnesota, with a minor in Industrial Engineering, researching how to optimize transportation networks and make them more efficient.

My experience maps directly to this role. I have worked extensively with large-scale transportation datasets (vehicle trajectories, GPS, signal timing) using Python, R, SQL, and Tableau to uncover patterns and drive decisions. Through the NSF I-Corps program, I led a team building a vehicle dispatch optimization system with modeled 75% cost savings — hands-on work in fleet logistics, demand forecasting, and cost analysis. I have also authored cost-benefit analyses for the Minnesota DOT that directly informed infrastructure deployment decisions.

I communicate well across audiences, having presented at national conferences (TRB, INFORMS), written technical reports for state agencies, and taught university courses. I am self-motivated, comfortable with ambiguity, and energized by collaborative, multicultural teams.

Volvo's mission toward sustainable, safe transport is what drives my own research. I would love to bring my analytical skills and genuine passion for vehicles and logistics to the Transport Material team this summer.

Sincerely,

Maziar Zamanpour
