

Dear Hiring Manager,

I am writing to apply for the Supply Chain Intern position at Tactile Medical. I am a Ph.D. candidate in Transportation Engineering at the University of Minnesota with a minor in Industrial Engineering, and I have made a deliberate decision to pursue supply chain as my career path — this internship is exactly the kind of hands-on experience I am looking for to build that future.

What draws me to Tactile Medical specifically is the chance to work on supply chain problems that directly improve people's lives. The combination of real project ownership, mentorship, and cross-departmental exposure in an 11-week program is rare, and I want to be part of it.

My background prepares me well for this role. I have coursework in Production and Inventory Systems and Operations Research, and hands-on experience with optimization, data analysis (Python, SQL, Excel, Tableau), and ERP systems (SAP). Through my research, I have managed multi-year projects for the Minnesota Department of Transportation — gathering data, analyzing key metrics, coordinating across teams, and delivering results to stakeholders. In the NSF I-Corps program, I built a dispatch optimization system for a car-sharing platform, working directly with demand forecasting and supply-demand balancing. These experiences have given me a practical understanding of how supply chains work and how data drives better decisions.

I am based in Minneapolis, ready to commit to the full 11 weeks, and excited to contribute to Tactile Medical's mission. Thank you for your consideration.

Sincerely,

Maziar Zamanpour
